

TI AIR SUSPENSION: INTEGRA SERIES

5 YEAR
800,000 KM
WARRANTY

FEATURES:

- Integral suspension, axle shocks, levelling valve and alignment for maximum weight savings
- Ride heights: 140mm - 410mm
- Lift kits available
- All axle welds are in non-critical stress areas
- Low tare weights from 420 - 470kg
- 16.5" x 7" brakes
- Eccentric axle alignment feature as STD

Watson & Chalin. Leadership in suspension technology

The Watson & Chalin **TI SERIES** is an integrated design, meaning that the axle is encapsulated within the air suspension and is permanently attached by means of a patented welded sleeve and Huck bolt clamping arrangement. This design allows for excellent tare weight and maintenance savings for the customer, whilst providing an extremely easy installation process for the body builder. The multifunctional rubber bush, specifically designed to allow for increased ride stability, whilst allowing correct articulation of the suspension by way of specifically designed voids within the bush. The reinforced eccentric pivot alignment feature ensures ease of wheel alignment and integrity of the unit. The TI suspension is standard with reinforced shock mounts to cope with the Australian Road Friendly Suspension requirements.

MODELS

AVAILABLE MODELS	SPINDLE	CAPACITY (kg)
TI-250	Tapered / Unitised	11,000
TI-251	Straight	11,000
TI-300	Tapered / Unitised	11,000
TI-301	Straight	11,000
TI-302	Straight	13,000
